

Gibraltar®

Compact Telescoping Single-Braced Hi-Hat Stand Model #GLRHH-SB

Gibraltar's innovative Telescoping Hi-Hat Stand is designed for quick setup and teardown. The GLRHH-SB features an independently adjustable telescoping hi-hat rod, that offers near-infinite height adjustment opportunities. The rod also easily telescopes down into a more compact size for easy packing into hardware bags.

Features

- Lightweight and portable
- Super low positioning even adjusts the hi-hat rod out of the way
- One step tear-down - telescopes down into one piece

Out of the carton Instructions

Fold down the footboard and insert both sides of the radius rod into the two receiving holes. Open tripod leg base and tighten wing screw.

Loosen upper tube wing screw (A) and hi-hat rod wing screw (B), extend upper tube to a comfortable playing height. Then tighten hi-hat rod wing screw first, then upper tube wing screw.

Playing Height Adjustments

The upper tube section and hi-hat rod adjust separately to give more height settings, including extra low position without the extra length of hi hat rod being in the way.

Loosen upper tube wing screw (A) and adjust playing height, then tighten wing screw

Loosen hi-hat rod wing screw (B) and adjust length of hi-hat rod, then tighten wing screw
